

Key:

- Site Boundary
- Watercourse
- Existing Trees
- Existing Hedgerow
- Overhead powerline
- Overhead Powerline Low Voltage
- Oil Pipeline (indicative)
- Ancient & Semi-Natural Woodland
- Footpath
- Seasonal wetland
- Sight lines
- Archeology 10 m Buffer Protection Zone

Zone A (Upper site)

- Open, flat/gently undulating topography with large geometric field boundaries, predominantly under arable crop. Enclosure pattern dominant over landform. Planting design to integrate with field pattern to provide unity.
- Dense hedgerows with mature trees (commonly Oak) provide beneficial wildlife corridors. Hedgerows most sparse to southern site boundary.
- Waterlogged ground and areas of standing water require further investigation; could provide basis for creation of ponds/scrapes for ecological benefit.
- Views south towards Wing village/church and SE toward Ascott Estate may may be maintained and enhanced at specific points e.g. from public footpath to SE of site (highlighted on plan).

Zone B (Lower site)

- More intimately undulating topography with smaller geometric field boundaries. Dense hedgerows with mature trees (Oak/Willow noted) provide beneficial ecological corridors.
- ASNW and wet woodland to south of site provides valuable habitat to link into.
- Potential to link access into Long Spinney/Bewick Green trails for informal recreational use. Southern area of site could include low density planting, including fruit trees, open space meadow areas. Access may also aid woodland management of Long Spinney.
